1 PROBLEM

Let Q be the field of rational numbers. Determine which of the following subsets of $Q[x]$ are ideals. When the set is an ideal, find its monic generator. All f such that $f(2) = f(4) = 0$.

2 DEFINITION

Definition: Let F be a field. An ideal in $F[x]$ is a subspace M of $F[x]$ such that fg belongs to M whenever f is in $F[x]$ and g is in M .

3 SOLUTION

Given	Q be the field of rational numbers. Subset: All f such that $f(2) = f(4) = 0$
To prove	Given subset is an Ideal. If Ideal then find its monic generator.
Proof	<p>Let, $M = \{f \in F[x] \mid f(2) = f(4) = 0\}$. $g(2) = g(4) = 0$ and $f(2) = f(4) = 0$</p> $(df + g)(2) = df(2) + g(2) = 0$ $(df + g)(4) = df(4) + g(4) = 0$ $\implies M \text{ is a subspace of } F[x]$ <p>Let suppose $f \in M$ and $g \in F[x]$. $(fg)(2) = f(2)g(2) = 0$ $(fg)(4) = f(4)g(4) = 0$ $\therefore fg \in M$</p> <p>Hence, M is an ideal.</p>
Representation of polynomial	$f(x) = (x - c)q(x) + r$ <p>When $f(c) = 0$ then $r = 0$.</p> $\implies f(x) = (x - 2)(x - 4)q(x)$ $\therefore f(x) = g(x)q(x)$ <p>Hence, $f(x)$ is generated by $g(x)$.</p>
