1 Problem

Consider the vectors in \mathbb{R}^4 defined by:

$$\alpha_1 = \begin{pmatrix} -1 \\ 0 \\ 1 \\ 2 \end{pmatrix}, \ \alpha_2 = \begin{pmatrix} 3 \\ 4 \\ -2 \\ 5 \end{pmatrix} \text{ and } \alpha_3 = \begin{pmatrix} 1 \\ 4 \\ 0 \\ 9 \end{pmatrix}.$$

Find a system of homogeneous linear equations for which the space of solutions is exactly the subspace of \mathbb{R}^4 spanned by the given three vectors.

2 Solution

A system of linear equations is homogeneous if all of the constant terms are zero. It can be represented as,

$$\mathbf{AX} = 0 \tag{2.0.1}$$

Let **R** be a echelon matrix which is reduced to A. Then the systems AX = 0 and RX = 0 have the same solutions. Here,

$$\mathbf{A} = \begin{pmatrix} -1 & 3 & 1\\ 0 & 4 & 4\\ 1 & -2 & 0\\ 2 & 5 & 9 \end{pmatrix} \tag{2.0.2}$$

By operating column operation on A, we get:

$$\begin{pmatrix}
-1 & 3 & 1 \\
0 & 4 & 4 \\
1 & -2 & 0 \\
2 & 5 & 9
\end{pmatrix}
\longleftrightarrow
\begin{pmatrix}
C_3 = C_3 - 2C_1 - C_2 \\
C_3 = C_3 - 2C_1 - C_2
\end{pmatrix}
\begin{pmatrix}
-1 & 3 & 0 \\
0 & 4 & 0 \\
1 & -2 & 0 \\
2 & 5 & 0
\end{pmatrix}$$
(2.0.3)

 & & \\
 & & \\
 & & \\
 & &$$

$$\stackrel{C_2=C_2-3C_1}{\longleftrightarrow} \begin{pmatrix}
1 & 0 & 0 \\
0 & 4 & 0 \\
-1 & 1 & 0 \\
-2 & 11 & 0
\end{pmatrix} (2.0.5)$$

$$\stackrel{C_2 = \frac{1}{4}C_2}{\longleftrightarrow} \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ -1 & \frac{1}{4} & 0 \\ -2 & \frac{11}{4} & 0 \end{pmatrix} (2.0.6)$$

The required system of homogeneous linear equations for which the space of solution is exactly the subspace of subspace of \mathbb{R}^4 spanned by the given three vectors are given as:

$$\mathbf{Y} = \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ -1 & \frac{1}{4} & 0 \\ -2 & \frac{11}{4} & 0 \end{pmatrix} \mathbf{X}$$
 (2.0.7)
